

***We identify energy wastage,  
find ways to lower your energy bills,  
and educate you in all aspects of energy efficiency***

- We take the time to understand the way you use energy.
- Qualified Engineers inspect every appliance that consumes energy ( i.e plant, lighting, air conditioning, pumps, hot water units, heaters, etc. )
- We place energy meters & loggers on critical equipment to accurately capture the real usage for full energy analysis. If needed your energy tariffs are also checked.

## High Bill Investigation

**We GUARANTEE to find out  
PRECISELY WHY your electricity  
bills are high.**

We visit your premises, inspect your electrical equipment, switchboards, meters, analyse /cross-check your energy accounts & monitor power consumption. All reasons for a high bill are clearly presented to you.

## Energy audits

**Only QUALIFIED Electrical  
Engineers conduct our energy  
audits.**

Energy Audits pinpoint energy waste & reveal clever ways to reduce your total energy consumption. Unbiased advice ensures you know the facts both good & bad to build an energy reduction action plan.

## Smart Meter Checkup

**Perhaps an INACCURATE SMART  
METER is the cause of your high  
electricity bills?**

We temporarily connect our trusted meter to your switchboard, to check if your electricity retailer is billing you accurately. If your smart meter is found inaccurate, you then have the proof to insist on a refund.
